

Keep communication and collaboration productive while preserving operating control.

We connect business Mail, meetings, files, office work, structured follow-through, administration, security controls, audit, and reports for organizations that need stronger visibility over people, domains, services, and external-provider risk.

- 1

The need

Regulated enterprises and critical service providers must enable fast work while demonstrating control over identity, outsourcing, information handling, continuity, and administrative action.
- 2

The first outcome

Apply platform, tenant, domain, and user controls within one operating model.

Start Identity and Mail	Coordinate Chat/Meet and schedules	Connect Suite and structured work	Govern Administration and reports

MAILBOX CONTROLS

Manage delivery behavior without leaving GoOfficePH.

Set forwarding, keep-copy behavior, vacation replies, and sender allow or block rules from one GoOfficePH screen. Changes are audited and applied to the GoOfficePH mail service in the background.

Forward to trusted addresses

Automatic vacation replies

Block unwanted senders

Realtime blacklist checks

Tenant-admin managed users

My GoOfficePH mailbox

Forwarding, vacation replies, and sender controls for your personal GoOfficePH address.

Security controls

Apply identity, mail, access, sharing, and alert controls across the workspace.

Governed

Cloud outsourcing and transferred processing still require documented safeguards and accountability.
