

HEALTHCARE ORGANIZATIONS

Faster coordination with clearer responsibility around every workspace.

We give hospitals, clinics, health networks, and administrative teams a Philippine-hosted workspace for nonclinical communication and collaboration, with identity, role, audit, and reporting controls alongside the daily applications.

Accountable

Philippine controllers remain responsible for personal data handled by processors and third parties.

What changes

Keep nonclinical communication, meetings, documents, schedules, and work items in one governed workspace.

What changes

Use tenant, domain, role, and group controls to separate facilities and operating teams.
